Bordo reduced shank HSS drills are ground and then a black finish is achieved by steam tempering, a thermal process resulting in a porous tool coating. This surface aids chip flow and heat dissipation. The drill is then ground a second time to achieve a bright finish on the shank and cutting edges.

DID YOU KNOW

Welding fumes – fine metal particles produced through welding that can be breathed in – have been classified as carcinogenic. This means employers in mining and other industries where welding takes place must make sure workers are protected, for example by installing welding fume extractors.
